

PURDUE UNIVERSITY
CENTER FOR CANCER RESEARCH

It is the mission of the Indiana Extension Homemakers Association to strengthen families through continuing education, leadership development, and volunteer community support.

LEARN

GROW

CARE

The Purdue University Center for Cancer Research is one of only 65 cancer centers in the country to earn the prestigious National Cancer Institute-designation and one of only seven basic science cancer centers. Purdue and MIT are the only two NCI-centers at a major university without a medical school and hospital. The Center for Cancer Research is also unique among NCI-designated basic science centers because it links cutting-edge basic cancer biology, outstanding medicinal chemistry expertise, and innovative engineering applications that define Purdue. Using the combined expertise of Purdue scientists, the Center focuses on discovery - discovery of biological processes, new technology, and new chemical entities that lead to the development of innovative instrumentation, diagnostic tools and novel cancer therapeutics. Simply put, our mission is discovery; our goal is to cure cancer!

As Center for Cancer Research leadership looks to the future, it is clear that our unique approach, which includes the integration of diverse scientific expertise and the combination of basic discovery and its application toward curing cancer, must be pursued with vigor. The timely accomplishment of the mission requires financial support of new and innovative investigations, the recruitment of outstanding new faculty and the construction of adequate facilities to house the research.

The members of the IEHA are committed to the mission of education, leadership and volunteerism. Through support of the Purdue Center for Cancer Research, IEHA embodies these ideas. Thanks to your efforts, resources will be available for scientists at Purdue to advance their quest for a cure.

Discovery is our mission
Curing cancer is our goal
